Steve Bezner

EVP, Customer Enablement and Services at Altus Group
Greater Houston

Summary

As a senior leader of Altus Group, I am proud to be part of a company that values innovation and transformation. We're the market leader that's striving for more, using our extensive expertise to look for new and better ways to serve our clients, and invest in our future. No longer are point solutions good enough. We are building platform solutions to drive strategic value for our customers; improving efficiencies, breaking down silos, orchestrating and unlocking the value of their data. It's exciting to be part of the digitalization of the commercial real estate space and my motto of "what got us here today won't get us there tomorrow" continues to ring true.

It's this transformative spirit that informs the kind of people who work here and the teams-based organization we've built. As a leader, I am continuously on the lookout for new talent and diverse perspectives. The kind of people who can us help get where we're going and the ones who can take us in a completely new direction. My philosophy is that we should always be in requirement mode, building a pipeline of great talent.

We give our teams the space and trust they need to accomplish great things while minimizing overbearing processes and bureaucracy. Trust is a key principle in creating small autonomous teams that are empowered and accountable, passionate about their work. As we move our legacy products to the cloud and create new products, I strive to create an environment of excitement, focusing on trust, authority and accountability. We invest in our employees' professional development and I love to promote from within. I believe in the importance of exploring new technology, learning new skills and providing opportunities.
